amy.rogers@mgnconsulting.com

Dear Ms. Rogers,

My proficiency in a wide range of computer hardware and software, including C/C++, Python, Java, AutoCAD, Revit, and MicroStation, combined with my strong knowledge of the National Electric Code (NEC) and my passion for my work, has led me to consistently exceed management and client expectations.

I look forward to bringing my work ethic and dedication to MGN Consulting's engineering department. A few of my greatest achievements during my three years at my previous company include:

- Cut average testing time by 42% by upgrading the old test system to a new system running on C++
- Reduced cost of IT infrastructure by 7% in 2020
- Was a core member of the team that identified the best concepts and implemented into production a new line of sensor systems

I would love to get together to discuss how my education and experience would benefit MGN Consulting. Please let me know when you are available.

Best Regards,

Daniel Anderson

P.S. I'd also like to tell you about how I won the Employee of the Month Award in September 2020 for my excellence, dedication, and willingness to always help team members with engineering questions.
