Dear Ms. Guest,

In my final year of study at the Metropolitan State University of Denver, I was the highest-scoring student for the Programmable Logic Controllers module. My assessors mentioned my in-depth technical knowledge and accuracy as their justification for awarding this mark. I hope to use my advanced skills to create innovative thermoelectric products at Berken Energy.

As an energetic and driven recent graduate with a keen interest in renewable energy technologies, the chance to work for an industry-leading company like Berken Energy appeals to me. My recent educational achievements demonstrate that I have the core knowledge and drive to excel. These include:

- Receiving a university commendation for my project on Power Generation Using Renewable Energies in 2019
- Earning praise from my professors for my committed learning attitude and strong work ethic four times
- Scoring in the top 10% of students for all coursework, including the Electric Power Distribution and Technical Programming Applications modules
- Please don't hesitate to get in touch to arrange an interview to discuss how my abilities and excellent attention to detail can benefit Berken Energy in 2021.

Sincerely,

Deborah Wang

P.S. I would love to explain how I achieved consistent scores of 90%+ for laboratory classes in my final year.
