Dear Ms. Allen,

During my most recent teaching placement, I devised an arithmetic skills intervention scheme for students with low math attainment, resulting in an average two-grade improvement in just three months. I am excited to use my strategic planning skills and flair for building pupil engagement to support your students in meeting their full academic potential.

As a dedicated teaching student soon to qualify from training college, the opportunity to use my exceptional syllabus knowledge at Bryant and Stratton is enticing to me. The following achievements show that I have the drive and pedagogical awareness to achieve significant progress:

- Assisting with delivering a supplementary course on APA referencing to prepare high school students for college, resulting in secure proficiency for all participants
- Receiving praise five times during observational assessments for my inspiring teaching style and high-quality resources
- Contributing to a math curriculum overhaul in collaboration with experienced colleagues that improved math attainment by 23% in a single semester

I hope to attend an interview to explain how I can help Bryant and Stratton's students increase their knowledge and confidence in applied mathematics and academic writing. I look forward to meeting at your convenience.

Sincerely,

Kayley Goodman

P.S. I would love to explain why my professors consistently graded me as 'outstanding' for classroom management in 2020.
